

Curious about your well water quality?

The Steele County SWCD will be providing free nitrate screening during the 2024 tree pickup.

To provide an accurate screening run your outside spigot closest to well head for 5-10 minutes and collect 1 cup of water in a clean plastic or glass container. Freeze your sample, fill out this form, and bring it with you when you pick up your trees. We will be doing the screening at a later date and mail you with the results.

Please note, this is a screening and not an official lab test. If elevated levels were to be found we recommended getting an official lab test to confirm the results.
